**Re: Right of Entry Request
 Commercial Property
 400 North Forsythe Street
 Franklin, IN 46131**

Dear Ms. Lawrence,

IWM Consulting Group, LLC (IWM Consulting) understands that you are or represent the owner of the property referenced above. IWM Consulting, under contract with Amphenol Corporation (Amphenol), is currently conducting Resource Conservation and Recovery Act (RCRA) site assessment activities as directed by the United States Environmental Protection Agency (USEPA) related to Administrative Order on Consent dated November 24, 1998. The site assessment activities are related to a historical release originating from the Former Amphenol Facility property located at 980 Hurricane Road, Franklin, Indiana (Site). These activities are being conducted under the direction of the USEPA. Information, including a map displaying the boundary of your property, was obtained from the online Johnson County, IN GIS webpage ([[HYPERLINK "https://beacon.schneidercorp.com/Application.aspx?AppID=129&LayerID=1554&PageTypeID=4&PageID=817&KeyValue=41-08-13-023-094.000-009"](https://beacon.schneidercorp.com/Application.aspx?AppID=129&LayerID=1554&PageTypeID=4&PageID=817&KeyValue=41-08-13-023-094.000-009)]) and is provided in **Attachment A**.

As part of the site assessment activities, the USEPA has requested that Amphenol obtain access to your property to further delineate potential soil and groundwater impacts. IWM Consulting requests your permission to install soil borings and temporary monitoring wells on the eastern portion of the property to obtain discrete soil and groundwater samples. Upon completion of the soil and groundwater sampling activities, the temporary wells will be permanently abandoned and will be backfilled with bentonite and capped at the surface with like material (i.e. soil, gravel, asphalt, or concrete). The temporary well installation and sampling activities will take approximately 1-2 weeks to complete, which includes boring and well installation, sampling, surveying, and abandonment activities. Additional assessment activities may be warranted based upon the results of the initial sampling activities, which may require the installation of additional soil borings or temporary monitoring wells. However, any additional assessment activities on your property will be discussed and approved by you prior to implementation. **The work activities will be completed concurrently with other scheduled assessment activities in the area and are tentatively scheduled to be completed during the weeks of February 25 and March 4, 2019.** A site map displaying the initially proposed boring locations is included as **Attachment B**.

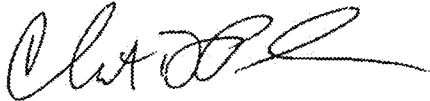

By allowing IWM Consulting to collect soil and groundwater samples from the proposed soil borings and temporary wells which would be located on your property, Amphenol agrees to provide you a copy of the laboratory analytical results from samples collected and analyzed from your property.

You will not be responsible for paying the cost associated with completion of the proposed work activities. If you accept the conditions of the access agreement included in **Attachment C**, please acknowledge your acceptance by signing and dating the access agreement and checking the appropriate box indicating that you have authority to sign as the property owner. The executed agreement can be forwarded to Chris Parks via email (cparks@iwmconsult.com) or by mail to IWM Consulting using the included addressed envelope.

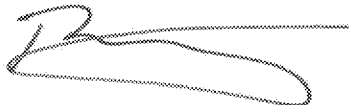

If you have any questions regarding the terms of this access request or would like additional information regarding the proposed work activities, please do not hesitate to contact the undersigned at **317-968-9256**. IWM Consulting would be more than happy to meet with you in person at the property in order to answer additional questions and to discuss the proposed work activities in more detail.

Sincerely,

IWM Consulting Group, LLC

Christopher D. Parks, LPG #2169
Senior Project Manager

Bradley E. Gentry, LPG #2165
Vice President/Brownfield Coordinator
